

Anna Yudina

annayudi@gmail.com / +49 157 596 029 27 / Berlin, Germany

Experienced tech lead with 15 years of expertise in software engineering seeking new opportunities with ethical purpose-driven companies. Passionate about using technology for good.

Work Experience

Tech Lead / Principal Engineer, Codacy, Nov 2022 – present

Codacy is a code quality and security platform that helps developers ship better code, faster.

My responsibilities and achievements:

- Making core features cheaper for the company and 100x faster for the user
- Leading engineering teams from architecture design to production release of complex scalable features
- Mentoring engineers on software craftsmanship, architecture design, and functional programming

Technologies: Scala, cats, FS2, AWS, Kubernetes, PostgreSQL, DynamoDB.

Volunteer Software Engineer, Yourequal, Mar 2021 – present

Yourequal empowers workers by providing transparency on workplace conditions and employer practices.

As a volunteer I led the full development lifecycle of an employer rating platform from concept to deployment, designed and built core functionality, and now continue to provide technical leadership and platform maintenance.

Technologies: Python, Django, JavaScript.

Backend Tech Lead, Clue (BioWink GmbH), Apr 2020 – Sep 2022

Clue is an FDA-approved health tracking application with 12+ million monthly users.

My key accomplishments:

- Grew the backend team from 4 to 11 and established best practices for development
- Re-architected vital application components (core functionality, state synchronization, data pipelines)
- Designed and delivered cross-functional solutions with Mobile, Data, and Support teams

Technologies: Kotlin, TypeScript, Spring, AWS, Kubernetes, PostgreSQL, RabbitMQ.

Senior Software Engineer, Relayr GmbH, Oct 2017 – Feb 2020

I developed Industrial IoT solutions, including a microservice-based cloud platform with MQTT/HTTP APIs; managed requirements, organized backlog, and mentored junior developers; managed customer-facing technical projects, e.g. got La Marzocco coffee machines connected to our platform.

Technologies: Scala, Python, Node.js, Kafka, PostgreSQL, Elasticsearch, Cassandra, Terraform.

Staff Software Engineer, Locarta GmbH, Feb 2016 – Sep 2017

As an early engineer at this location data analytics startup, I built microservices, data mining tools, and geo-visualization interfaces for processing millions of mobile device data points.

Technologies: Scala, Spark, Elasticsearch, Kafka, Play, React, HBase, PostgreSQL.

Software Engineer, EXANTE Ltd., Nov 2012 – Feb 2016

Developed backend and cross-platform desktop frontend for a financial trading terminal.

Technologies: Scala, Java, NetBeans, Swing.

Early Career***R&D Intern, USI Distributed Systems Group, 2011***

Implemented a Byzantine fault-tolerant database in Java.

Software Engineering Intern, EMC, 2009-2010

Developed storage array simulators and test automation software.

Received EMC Bright Internship Award (2009) and Bronze Star Award (2010).

Junior Engineer Intern, Motorola, 2008-2009

Developed sound signal analysis algorithms in C/C++.

Education***Saint Petersburg State Electrotechnical University LETI, 2006-2010***

BSc. in Engineering and Technology, major in Informatics and Computer Engineering

Università della Svizzera Italiana, Faculty of Computer Science, 2010-2012

Advanced coursework focused on Distributed Systems and Formal Languages Engineering
