

Anna Yudina

annayudi@gmail.com / +49 157 596 029 27 / Berlin, Germany

Tech lead with 15 years of software engineering experience, specialized in building scalable backend systems and expanding into full-stack development.

Professional Experience

Tech Lead / Principal Engineer, Codacy, Nov 2022 – present

Codacy is a SaaS platform that analyzes code quality and security by integrating with version control systems and IDEs to provide automated code reviews and insights.

- Led engineering teams from architecture design to production release of complex scalable features.
- Implemented monitoring and alerting for data processing pipelines, enabling data-driven decisions for product strategy and technical debt prioritization.
- Optimized legacy core features, reducing costs for the company and improving performance by 100x.
- Mentored engineers on software craftsmanship, architecture design, and functional programming.

Technologies: Scala, cats, FS2, AWS, Kubernetes, RabbitMQ, PostgreSQL, DynamoDB.

Backend Tech Lead, Clue (BioWink GmbH), Apr 2020 – Sep 2022

Clue is an FDA-approved health tracking application with 12+ million monthly users.

- Re-architected vital application components (core functionality, state synchronization, data pipelines) and coordinated cross-functional efforts to rebuild these systems.
- Designed and delivered cross-functional solutions in collaboration with Mobile, Web, Data, and Support teams.
- Defined hiring process for the Backend department and grew the team from 4 to 11 engineers.
- Established best practices for efficient software development in an asynchronous regulated environment.

Technologies: Kotlin, TypeScript, Spring, AWS, Kubernetes, PostgreSQL, RabbitMQ.

Senior Software Engineer, Relayr GmbH, Oct 2017 – Feb 2020

Relayr is an Industrial IoT platform that connects equipment to the cloud for real-time monitoring and analytics.

- Developed a microservice-based cloud platform with MQTT/HTTP APIs.
- Led on-site technical integrations, working directly with client engineers to connect equipment (e.g. La Marzocco coffee machines) to the Relayr platform.

- Managed requirements and organized the Backend department backlog.
- Mentored junior developers.

Technologies: Scala, Python, Node.js, Kafka, PostgreSQL, Elasticsearch, Cassandra, Terraform.

Staff Software Engineer, Locarta GmbH, Feb 2016 – Sep 2017

Built backend microservices, ML data pipelines, and geo-visualization interfaces for processing millions of mobile device data points as an early hire at this location data analytics startup.

Technologies: Scala, Python, Spark, Elasticsearch, Kafka, Play, React, HBase, PostgreSQL.

Software Engineer, EXANTE Ltd., Nov 2012 – Feb 2016

Developed backend and cross-platform desktop frontend for a financial trading terminal.

Technologies: Scala, Java, NetBeans, Swing.

Early Career and Side Projects

Volunteer Software Engineer, Yourequal, Mar 2021 – present

Led the full development lifecycle of an employer rating platform from concept to deployment, designed and built backend and frontend functionality with Python, Django, and JavaScript.

R&D Intern, USI Distributed Systems Group, 2011

Implemented a Byzantine fault-tolerant database in Java.

Software Engineering Intern, EMC, 2009-2010

Developed storage array simulators and test automation software in C, C++, and Perl.

Received EMC Bright Internship Award (2009) and Bronze Star Award (2010).

Junior Engineer Intern, Motorola, 2008-2009

Developed sound signal analysis algorithms in C and C++.

Education

Saint Petersburg State Electrotechnical University LETI, 2006-2010

BSc. in Engineering and Technology, major in Informatics and Computer Engineering

Università della Svizzera Italiana, Faculty of Computer Science, 2010-2012

Advanced coursework focused on Distributed Systems and Formal Languages Engineering
